Analysis results

Delete this report

This report is general information. It does not say a product is completely safe or completely harmful, and it does not replace advice from a doctor or pharmacist.

Product information

Product	Brand	Category
Tresemme	Not identified	Shampoos and hair-care products

Confidence in the ingredient list: Typed or pasted by you. Confidence depends on how closely it matches the printed label.

Analysed on 10/12/2026, 11:00:55 PM using dataset version 0.1-starter (53 reviewed ingredients).

Overall assessment

Overall concern level

Some cautions

This level summarises the ingredients we could assess. It is not a safety guarantee and it is not a score from a validated health-risk model. 11 of 23 ingredients could be assessed.

23	5	6	0	12
Ingredients analysed	Low concern	Need caution	Significant concern	Could not be assessed

The AI service returned an error (400). Check your API key and model name.

Main findings

Sodium Laureth Sulfate Caution

Documented skin, scalp and eye irritation, especially with long contact or high concentration. It is milder than sodium lauryl sulfate, so most people tolerate it in rinse-off products.

Cocamidopropyl Betaine Caution

Usually well tolerated, but it is a recognised cause of contact allergy in a small number of people. Reactions have often been traced to impurities from manufacturing rather than the molecule itself.

Sodium Hydroxide (Caustic Soda) Caution

In concentrated form it is corrosive and causes serious burns to skin and eyes. In finished soaps and cosmetics it is used up or neutralised during manufacture, so little remains.

Fragrance (Parfum) Caution

One word on a label can stand for many fragrance chemicals, and fragrance is among the most common causes of contact allergy to cosmetics.

Limonene Caution

A recognised fragrance allergen, mainly after it oxidises with air exposure.

Linalool Caution

A recognised fragrance allergen. It can oxidise on contact with air, and the oxidised forms are more likely to cause allergy.

Ingredient-by-ingredient analysis

All | Significant | Caution | Low concern | Not assessed

Water (Aqua)	Low concern
Sodium Laureth Sulfate Listed as: Sodium Laureth Sulfate (surfactant)	Caution
Cocamidopropyl Betaine Listed as: Cocamidopropyl Betaine (surfactant)	Caution
Salt (Sodium Chloride) Listed as: Sodium Chloride (viscosity controller)	Low concern
Silk protein	Not assessed
Collagen complex	Not assessed
Arginine	Not assessed
Lysine HCl	Not assessed
Ceramide NG	Not assessed
Collagen Amino Acids	Not assessed
Silk Amino Acids	Not assessed
Citric Acid	Low concern
Sodium Benzoate	Low concern
Disodium EDTA	Low concern

Sodium Hydroxide (Caustic Soda)
Listed as: Sodium Hydroxide — Caution

Polyquaternium-10 — Not assessed

PPG-6 — Not assessed

Fragrance (Parfum)
Listed as: Parfum (Fragrance) — Caution

Benzyl Alcohol — Not assessed

Geraniol — Not assessed

Hexyl Cinnamal — Not assessed

Limonene — Caution

Linalool — Caution

Who may need extra care

- People with eczema or very sensitive skin or scalp
- People who have had contact dermatitis from shampoos or soaps
- Young children
- People with sensitive skin
- People with a known fragrance allergy
- People with fragrance allergy

Practical usage guidance

- Rinse well. Avoid eye contact. Stop use if the scalp becomes red or itchy.
- Stop use if you develop an itchy rash on the scalp, face or hands.
- Wear gloves and eye protection with strong cleaners. Never mix with other cleaners. Keep locked away from children. Seek medical help after any splash in the eyes.

- Patch test new products on a small area. Choose fragrance-free products if you know you react.
- Patch test. Choose fragrance-free products if you react.

Missing information

- The label does not state how much of each ingredient is present, and risk often depends on concentration.
- Ingredient presence alone does not establish the actual risk of the finished product.
- 12 of 23 ingredients could not be assessed: Silk protein, Collagen complex, Arginine, Lysine HCl, Ceramide NG, Collagen Amino Acids, Silk Amino Acids, Polyquaternium-10, PPG-6, Benzyl Alcohol, Geraniol, Hexyl Cinnamal.

Regulation in India

In India, cosmetics are regulated by the Central Drugs Standard Control Organisation (CDSCO) under the Drugs and Cosmetics Act, 1940 and the Cosmetics Rules, 2020, and must follow applicable Bureau of Indian Standards requirements. This tool does not check a product against those rules. Where a restriction is mentioned for an ingredient, it is stated for the region named and Indian status is marked as not verified.

Recommendations

ChemCheck does not suggest alternative products because it does not hold a verified product and ingredient database. To compare this product with another one under the same criteria, use the comparison tool.
